

LOSING A TOOTH!

© Autism Little Learners

Losing a tooth is something
that happens to everyone.

2

People usually lose teeth when
they are children.

3

This is because people are born
with "baby teeth". Once we lose
the baby teeth, adult teeth grow in!

4

First, the tooth gets a little loose and it can be wiggled.

5

Then, the tooth gets very loose and wiggles a lot.

6

Next, the tooth will fall out.

7

There is usually a little blood when the tooth falls out. It's okay!

After the tooth falls out, my
parents will help me.

Losing a tooth might make me
feel worried, but it will be okay!
